Project Title: FindIt!

Test Cases:
(Actual Results and Pass/Fail will be filled in by user)

Test 1: Check to see if user can check to see if they found the correct location of where the image was taken.

Steps	Input/Interaction	Expected Results	Actual Results	Pass or Fail
1	During a test round, show the user the correct location of the current image.	App states that you are playing in the current round		
2	Press the "Am I Here" button on the Current Round Page	You will get a notification saying if you found the correct location or not.		

Test 2: Check to see if the user can upload a new image after winning the previous round.

Steps	Input/Interaction	Expected Results	Actual Results	Pass or Fail
1	App admins (for testing purposes) place you in a win state	App states that you are the winner of the round and that you get to start the next round		
2	App presents "Create new round" terminal, and user is asked to upload picture. User clicks "upload picture"	After upload app notifies you if it is successfully stored in server/database		
3	Attempt to click "upload picture again"	App prompts error and states "can only upload once"		

Test 3: Navigating the website

Steps	Input/Interaction	Expected Results	Actual Results	Pass or Fail
1	Enter website url	Take user home page that prompts the user to login or register		
2	Click login button	User gets moved to login page and put in username and password		
3	Login to website	Moves user to homepage that allows them to check profile page. leaderboard , or the found it button		
4	Click profile page	User is moved to profile page that list username, points and email		
5	Click leaderboards	User is moved to leaderboards where they can see all users that have points and how many wins.
